CONNECTIONS

System Connection

Power and speakers cable connection

CONNECTIONS

Point 1 Graphic Equalizer

This unit is a power amplifier incorporating a graphic equalizer. The 5-band graphic equalizer provides signal equalization for the amplifier.

■ Adjustment

Adjust the level of each frequency band as desired.

• To increase the level:

Turn the control of the band you wish to adjust to the right.

• To decrease the level:

Turn the control of the band you wish to adjust to the left.

NOTE

If the treble or bass control is increased on the center unit and the graphic equalizer levels are increased at the same time, the sound may be distorted. Please adjust the graphic equalizer taking the balance with the positions of the treble and bass controls of the center unit into consideration.

Point 2 Flexibility

KAC-Q62 is compatible with a large variety of systems by combining the switches and functions described in the following.

1 Operation switch

This switch selects the input method of the signals to be amplified by amps A and B.

• STEREO position

The input left and right signals are amplified separately. Use this position when the unit is used as a stereo amplifier.

• MONO(L) position

The input left signal is amplified twice the normal boost level. Use this position when the unit is used as a high-power monaural amplifier. (The input right signal is not output.)

2 Filter switch

These switches allow filtering of the output signals.

• HPF(High Pass Filter) position (12dB/oct. slope)

Only frequencies of 80Hz or higher are output. (Frequencies below 80Hz are cut.)

• OFF position

The original sound without filtering is output.

3 Input sensitivity

Adjust this control according to the pre-out level of the center unit connected to this amp.

Center unit pre-out level	Amplifier input sensitivity
300 mV	MAX (0.15 V)
800~1000 mV	0.3 V
1.5 V	0.5 V

NOTE

Refer to "Specifications" on the center unit's instruction manual about the pre-out level.

System Examples

By combining the switches and functions of the KAC-Q62, you can implement a wide range of audio system configurations.

■ Example 1

A high-power system can be implemented by combining two units of KAC-Q62.

■ Example 2

■ Set the Low pass filter switch to ON and set the frequency control to the 80Hz position.
 • Use a power amplifier equipped with the low pass filter function (KAC-1023/923/823 etc.).
 • For details on the system connection, power connection, etc., please refer to the instruction manual provided with your power amplifier.

Point 3 Tri-mode

With the KAC-Q62, a subwoofer can be added easily to the speaker system by making use of the properties of coils and capacitors. This mode of operation is called Tri-mode.

■ Principle of Tri-mode

- Method of frequency band division using a coil and capacitor ... in case of 6 dB/oct. slope

- Coil (L) : Passes low frequencies and blocks high frequencies. (Low pass)
- Capacitor (C) : Passes high frequencies and blocks low frequencies. (High pass)

• Your coil and capacitor

Use the following formula to identify the coil and capacitor you need in your system.

$$C = \frac{159000}{f_c \times R} \text{ (}\mu\text{F)} \quad L = \frac{159 \times R}{f_c} \text{ (mH)} \quad f_c = \text{Crossover Frequency (Hz)} \quad R = \text{Speaker Impedance (}\Omega\text{)}$$

Example :

When it is required to set a crossover frequency of 120 Hz using speakers with an impedance of 4 ohms, Prepare commercially-available coil and capacitor with the closest ratings to the results calculated from the formula above. The capacitor rating should be as close as possible to 331.25 (μF) and the coil rating should be as close as possible to 5.3 (mH).

■ System example

To use the Tri-mode configuration, set the OPERATION switch to the STEREO position.

CAUTION

Compose the speaker system so that the overall speaker impedance seen from the amplifier unit is no less than 2 ohms. If the impedance is less than 2 ohms, excessive current may flow and the amplifier unit may be damaged.

BLOCK DIAGRAM

CIRCUIT DESCRIPTION

DC-DC PWB

Ref. No.	Ref. Name	Purposes, Functions	Operation, Condition, Compatibility
IC1	UPC494C	OSC for DC/DC converter	Clock oscillator, protection comparator.
IC2	NJM78M15FA	+15 V regulator power IC	+15 V supply.
IC3	NJM79M15FA	−15 V regulated power IC	−15 V supply.
Q1	2SC4640T/U	Switch	Transistor accepting the P.CON signal. ON when P.CON is H, OFF when it is L.
Q2	DTA124ES	Power ON/OFF	Turns OSC IC ON/OFF and muting circuits power ON/OFF.
Q3	2SC4640T/U	Mute control (SW) Power amp power control SW	Muting is turned ON by P.CON ON → Q3 OFF → Q4 ON. Power is supplied by P.CON ON → Q9 ON → Q10 ON.
Q4	DTA124ES	Mute driver	Driver of muting transistors Q102 and Q202
Q5, 6	2SA1782T/U	Discharging Transistor	Transistors for discharging the potential charged as gate capacitance of MOS FETs Q7 and Q8.
Q7, 8	2SK1257	MOS FETs for DC/DC converter (for current amp)	ON when gate is H, OFF when it is L. Push-pull configuration.
Q9	DTC124ES	Q10 driver	With time constant. Goes ON to turn Q10 ON when the set is operating.
Q10	2SA1782T/U	Power amp power SW	Delays the power supply to prevent shock noise. ON while the set is operating.
D1	RM4ZLF		
D2, 3	1SS131	Q2 and Q3 malfunction prevention	
D4, 5	1SS131	Q4 and Q9 malfunction prevention	
D6	1SS131	Reverse current prevention	Isolation between IC1 current and the cathode of D11.
D7, 8	1SS131	Q5 and Q6 malfunction prevention	Retains bias voltages of Q5 and Q6.
D9	FMU12S	Secondary + power rectifier diode	
D10	FMU12R	Secondary − power rectifier diode	
D11	1SS131	Voltage retention of muting driver Q4	Retains the muting power when P.CON goes OFF.
D12	1SS131	Noise prevention against Q10 ON/OFF	Delays the switching of Q10 to reduce P.CON ON/OFF shock noise.
D13, 14	DSK10C	3-terminal regulators for IC2 and IC3 malfunction prevention	Prevents output malfunction (latch down) of IC2 and IC3 when P.CON goes ON/OFF.

CIRCUIT DESCRIPTION

MAIN PWB, GE PWB

Ref. No.	Ref. Name	Purposes, Functions	Operation, Condition, Compatibility
IC101, 201	NJM4565LD	Isolation amps	
IC102	NJM4565LD	Differential amp	L CH positive phase and R CH negative phase amplification. (R CH used in TRI mode only)
IC105, 205	M5227P	GE IC	5-point: 50 Hz, 200 Hz, 800 Hz, 3.2 kHz, 12.8 kHz. Variable range ±10 dB.
Q101, 201	2SC4640T/U	Active Transistor for HPF	
Q102, 202	2SC4640T/U	Muting Transistor	ON for muting, normally OFF.
Q103, 104, 203, 204	2SA1782T/U	Differential amps in main amp 1st stage	
Q105, 106, 205, 206	2SC2784(F)	Differential amps in main amp 2nd stage	
Q107, 207	2SD1200(Q)	Idling current temperature compensation Transistor	Idling adjustment using VR102/202 between collector and base. (Idling current: 30 mA)
Q108, 208	2SD2225(R)	Power amp drivers	
Q109, 209	2SB1473(R)	Power amp drivers	
Q110, 210	2SC4385(O, Y)	Main amp power Transistor	
Q111, 211	2SC1670(O, Y)	Main amp power Transistor	
Q112, 212	2SC4640T/U	Overcurrent detection Transistor (for protection)	Detection based on the potential difference of emitter resistance during load overcurrent.
D101-104, 201-204	1SS131	Electrostatic breakdown protection	
D105, 205	1SS131	Muting (crosstalk improvement)	
D106, 206	1SS131	Malfunction prevention of overcurrent detector circuit	
D107, 207	1SS131	Malfunction prevention of error amp IC7	Isolation between thermal shutoff detector circuit and load overcurrent detector circuit.

DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.

Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance. Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels.

Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Spannungsmesser gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U. geringfügig.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

SPECIFICATIONS

Specifications subject to change without notice.

Audio section

Max power output (4 Ω)	
Normal.....	80 W \times 2
Bridge.....	180 W \times 1
Rated power output (4 Ω)	
Normal.....	40 W \times 2 (20 Hz \sim 20 kHz, less than 0.08 % THD)
Bridge.....	110 W \times 1 (1 kHz, 0.08 % THD)
Rated power output (2 Ω)	
Normal.....	55 W \times 2 (1kHz, 0.8 % THD)
Frequency Response.....	6 Hz \sim 65 kHz (-3dB)
Signal to Noise Ratio.....	100 dB
Sensitivity (MAX).....	0.15 V (rated output)
Sensitivity (MIN).....	3.0 V (rated output)
Input impedance.....	10 k Ω
Damping Factor(100 Hz).....	More than 100

EQ section

Equalizer Center Frequency.....	50 Hz, 200 Hz, 800 Hz, 3.2 kHz, 12.8 kHz
Frequency Range.....	-10 \sim +10 dB

General

Operating voltage.....	14.4 V (11 - 16 V allowable)
Current consumption.....	16 A (1 kHz, 10%)
Dimensions (W X H X D).....	220 X 48 X 200 mm 8-11/16 X 1-7/8 X 7-7/8 in.
Weight.....	2.1 kg (4.7 lb)

KENWOOD CORPORATION

Alive Mitake, 2-5, 1-chome Shibuya, Shibuya-ku, Tokyo 150, Japan

KENWOOD SERVICE CORPORATION

P.O. BOX 22745, 2201 East Dominguez St., Long Beach, CA 90801-5745, U.S.A.
